

S5 Figure

Heatmaps: Proportion of participants reporting symptoms or effects by illness phase (includes all questions)

Figure S5: **Participants from all recruitment modes from subset of individuals who completed a survey in each illness phase** (left column: early-acute, middle column: late-acute, right column: convalescent phase). The proportion is represented by the redness of the cell and the actual proportion is shown by the number in each cell. * McNemar's test: $P<0.05$, ** * McNemar's test: $P<0.01$.

early_acute
